

SUMMARY

Software engineering student with hands-on experience in **enterprise**, **AI-assisted**, and **full-stack** development. Strong foundation in **OOP**, **data structures**, **system design**, and **REST APIs** – shipped scalable solutions using **Java**, **JavaScript**, **React**, **Node.js**, **Spring Boot**, and cloud services across **authentication**, **AI integrations**, and **geospatial processing**.

EDUCATION

Maharashtra Institute of Technology (MIT), Chhatrapati Sambhajinagar	Aurangabad, India
Bachelor of Technology – Computer Science Engineering	2022 – 2026
CGPA: 8.55	
Z.P Secondary and Higher Secondary School, Washim	Maharashtra, India
Higher Secondary (12th)	2022
77.83%	
S.M.C English School, Washim	Maharashtra, India
Secondary (10th)	2020
94%	

EXPERIENCE

Paarsh Infotech Pvt. Ltd.	Nashik, India
Full Stack Developer Intern	Jan 2026 – May 2026
- Developed software modules supporting customer and order management workflows using Java, Spring Boot and React.js; implemented validation and business rules to deliver reliable enterprise application features. - Participated in feature planning, deployment activities, application configuration, and end-to-end software development while collaborating with cross-functional teams to troubleshoot and resolve technical issues.	

PROJECTS

CityPulse – Smart Traffic Navigation System	In Progress
YOLOv8, OpenCV, Node.js/Express, PostgreSQL/PostGIS, Supabase, Google Maps API	
- Built and deployed a YOLOv8-based computer vision pipeline in a Linux environment using Python for real-time traffic monitoring, gaining hands-on exposure to Linux system configuration and application execution. - Designed adaptive signal scheduler computing green/yellow/red phases dynamically from live queue data, preventing collision states across concurrent intersections. - Mapped live signal states to user routes via Google Directions API + PostGIS ST_DWithin (50m radius) with decoded polylines for sub-100ms spatial lookups.	

IDEAL – AI-Assisted Web IDE

Next.js, TypeScript, Tailwind CSS, ShadCN, Monaco Editor, Xterm.js, Piston API, CodeLlama-2	
- Designed browser-based IDE offloading compilation and runtime to Piston API, enabling execution on low-spec systems without local setup. - Integrated Monaco Editor + Xterm.js terminal with client-side file system handling (File System Access API + IndexedDB) for real-time coding and learning workflows. - Owned end-to-end frontend and backend integration in a team of three, configuring development environments and ensuring reliable communication between application components and APIs.	

AttendIQ – AI-Powered Attendance Management System

React, Vite, Node.js, Express.js, MongoDB Atlas, Groq API (LLaMA 3.1), Passport.js, Google OAuth 2.0	
- Built RESTful Node.js/Express APIs for subject-wise and date-wise attendance tracking with real-time MongoDB Atlas sync and AI-driven at-risk insights via Groq API (LLaMA 3.1-8b-instant). - Implemented Google OAuth 2.0 via Passport.js with production-hardened cross-domain session handling across Vercel (frontend) and Render (containerized backend). - Developed React + Vite dashboard with live stats, weekly trend charts, and AI-generated intervention reports; configured CORS policies and secured API routes for production reliability.	

SKILLS SUMMARY

Languages	Java, JavaScript, TypeScript, SQL, HTML5, CSS3
Frameworks	React.js, Next.js, Node.js, Express.js, Spring Boot, Hibernate, Tailwind CSS
Databases	MySQL, PostgreSQL, PostGIS, MongoDB Atlas
Concepts	OOP, Data Structures, Algorithms, System Design, SDLC, REST APIs
Tools	Git, GitHub, Postman, VS Code, Vercel, Render, Figma, YOLOv8, OpenCV

LEADERSHIP & ACTIVITIES

Event Management Lead, College Student Council & Co-Creative Head, Department E-Magazine – planned large-scale technical/cultural events; managed content coordination, design structure, and editorial workflow. - Volunteered across multiple departmental and academic initiatives supporting teamwork and student community building.
